- Small format Lens 1/5 "
- Focus adjustable from 30mm to infinite
- Fully compatible with Windows 95 / 98 / ME / 2000

System requirments

- Pentium CPU 166Mhz or higher
- A free USB gate
- Minimum 10 MB harddisk space
- 32 MB internal memory
- Windows 9x / Windows ME / Windows 2000

English version

Software-installation

Before you connect the Sweex USB webcam you should first place the included cd-rom in the cd-rom drive. The cd-rom will start automatically.

If the cd does not start automatically you should go to the start menu and subsequently to "Execute" and you fill in: X:\Autorun\Install.exe , where X is the drive letter of your cd-rom drive. Next you should press on "Enter".

The next screen appears and you select the option "Install USB Camera Driver".

The installation procedure proceeds almost fully automatically. The following windows will appear:

Now you should plug the USB plug into a free USB gate in your computer.

The software is now installed automatically.

If the screen shown above has disappeared we select the 'apllicatie software', "Install SmartCam 2.1".

The speed with which this installation procedure is completed will depend on your system.

Once the computer has been restarted you will notice that two icons have been added to your screen being the “video-monitor” and the “videomail”.

The program “Video-monitor” allows you to activate the security camera, make photo’s and send these vi email. Also you can record an AVI-film and send this film if required.

With “Video Mail” you can send a ‘live email’. The application is made to allow you to send this videomail directly. Ypou position yourself in front of the camera, you tell you story and you click on the ‘send’ button and before you know the videomail has been send to its destination!
